

Vefects: Space VFX

Venture into the outer wilds of Space VFX!

You'll find effects ranging from lasers, missiles, stars, shields...

The pack contains a procedural Space Background material that allows you to use different nebula maps for the background and the stars. You can rotate it, pan it, adjust colors, distortion, feel free to explore! Usage is pretty simple: assign one of the materials to the VFX_Space_Background prefab. You'll find the materials in Assets/Vefects/Space VFX URP/Environment/Space Backgrounds/Materials/

In that same environment folder you'll find both Planets and Stars too.

Check Assets/Vefects/Space VFX URP/Space VFX to see Missiles, Lasers, Shields and Thrusters.

The work on those is pretty much the same: if you want to adjust anything, duplicate the original prefabs / materials, rename them, adjust them, and spawn them however you like.

Beware, there's no actual functionality or game logic inside the pack, it's an art based pack for you to use with your own game logic, so stuff like missiles being shot, travelling, exploding and hurting a target is something each user will do on their own based on the needs of their project, as it's impossible for us to code anything else than just something functional for demo purposes, taking into account that we can't know each user's needs nor project game logic to hook those behaviours up.

The pack is pretty simple to grasp, but if you've got any other questions, contact us.

Have fun! :)
